

# Continuous scans at the chemical crystallography beamline P24 at DESY

Martin Tolkiehn

**Deutsches Elektronen-Synchrotron**

Ein Forschungszentrum der Helmholtz-Gemeinschaft

September 20, 2023

- ▶ The beamline P24
- ▶ Continuous scans
- ▶ Current implementation
- ▶ Future perspectives

# Beamline P24

- ▶ Chemical crystallography beamline, PETRA extension
- ▶ Optical elements at  $55 \pm 5\text{m}$
- ▶ 2 Experimental stations at 84m and 90m

# P24 under construction (in early 2017)

# Four circle diffractometer in EH2

# Single crystal diffraction

# Single crystal diffraction

# Single crystal diffraction

$$I_{\text{int}} = \int_{\phi_0}^{\phi_0 + \Delta\phi} I d\phi = \int I \omega dt$$

# Different scan types

## Step scan

# Different scan types

## Step scan

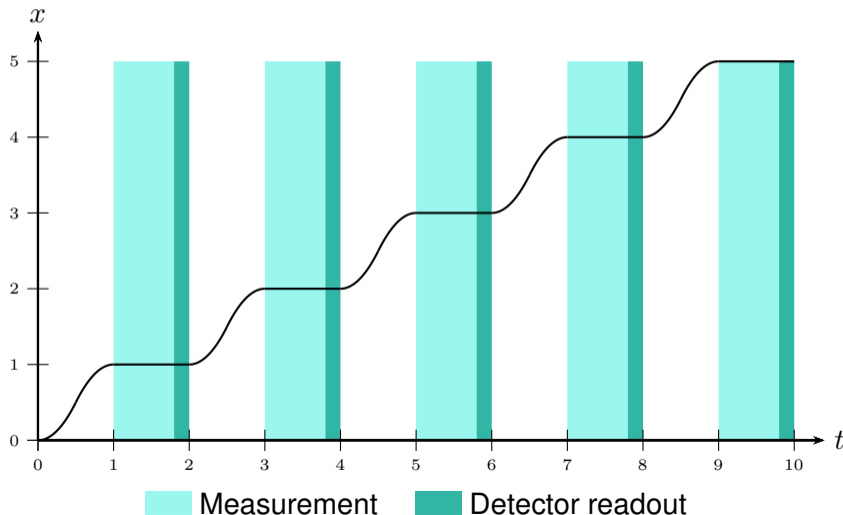

Measurement

## Step scan

# Different scan types

## Continuous scan

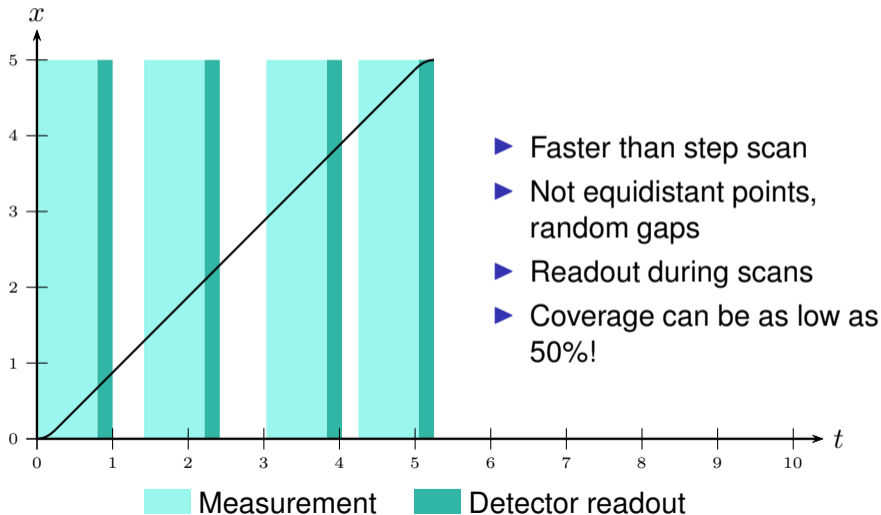

Measurement

Detector readout

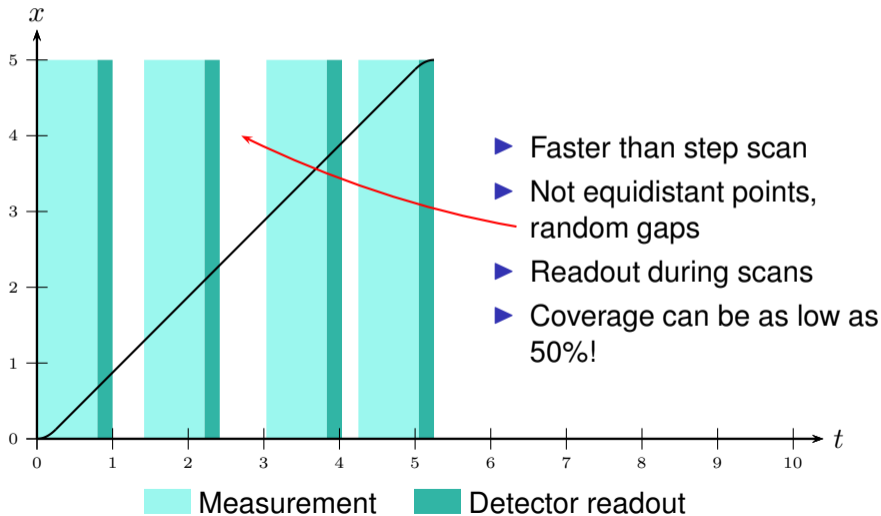

# Different scan types

## Continuous scan – software controlled

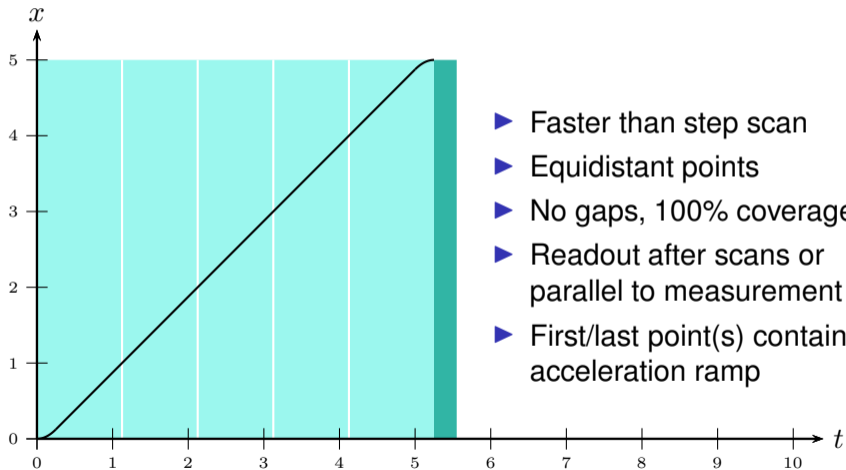

# Different scan types

## Continuous scan – software controlled

# Different scan types

## Continuous scan – hardware controlled

- ▶ Faster than step scan
- ▶ Equidistant points
- ▶ No gaps, 100% coverage
- ▶ Readout after scans or parallel to measurement
- ▶ First/last point(s) contain acceleration ramp

Measurement

Detector readout

# Multi axis motor controller

## OMS MAXv

- ▶ 8 axis controller
- ▶ Stepper or servo motors
- ▶ Step/Direction output or analog output
- ▶ 10 encoder inputs,
- ▶ Limit and home switch inputs
- ▶ GPIO

# Multi axis motor controller

## OMS MAXv

- ▶ 8 axis controller
- ▶ Stepper or servo motors
- ▶ Step/Direction output or analog output
- ▶ 10 encoder inputs,
- ▶ Limit and home switch inputs
- ▶ GPIO

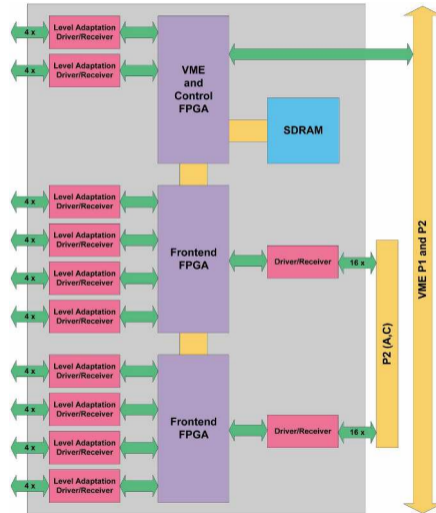

Step signal can be used for synchronization with special RTM

# Multi channel scaler (MCS)

Struck SIS3820:

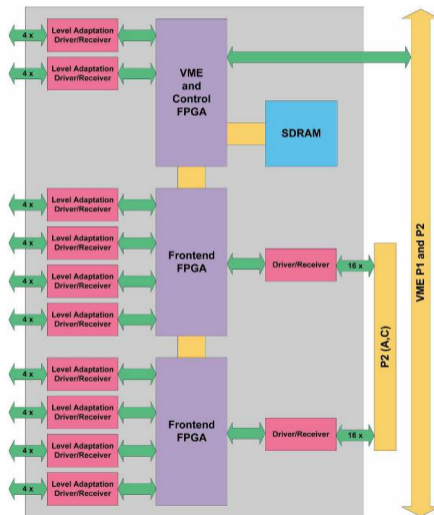

- ▶ 32 channel, 32 bit counter
- ▶ 960ns min. dwell time
- ▶ 64MB on board SDRAM
- ▶ 80MB/s readout

# Multi channel scaler (MCS)

Struck SIS3820:

- ▶ 32 channel, 32 bit counter
- ▶ 960ns min. dwell time
- ▶ 64MB on board SDRAM
- ▶ 80MB/s readout
- ▶ Synchronization with motor controller:
  - ▶ Step signal
  - ▶ Quadrature encoder
- ▶ Sync. outputs for other devices

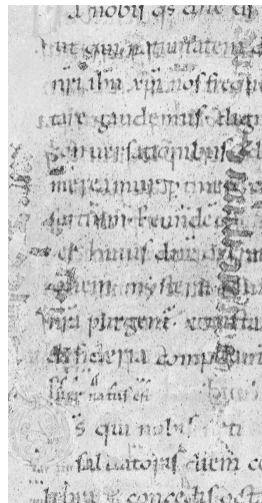

# Continuous scans with the SIS3820

- ▶ Motor step signal is connected to one of the counter channels
- ▶ Enable and LNE signals are available at the front panel
- ▶ Synchronization with other devices is possible (e.g. SIS3302, LAMBDA, ...)
- ▶ Supported by spec (`flyscan`)

# Example: Fluorescence mapping of old handwritings

Left: Continuous scans with ONLINE software    Right: Continuous scans with SIS3820

## Challenges:

- ▶ OMS MAXv and SIS3820 are VME bus cards  $\Rightarrow$  Technology from last century!
- ▶ SIS3820 is based on obsolete Spartan 2 FPGAs. (Only few boards are still in stock)
- ▶ Needs cable connections. (Scalability?)

## Challenges:

- ▶ OMS MAXv and SIS3820 are VME bus cards  $\Rightarrow$  Technology from last century!
- ▶ SIS3820 is based on obsolete Spartan 2 FPGAs. (Only few boards are still in stock)
- ▶ Needs cable connections. (Scalability?)

## Solution:

Replace VME by a more modern standard like MTCA

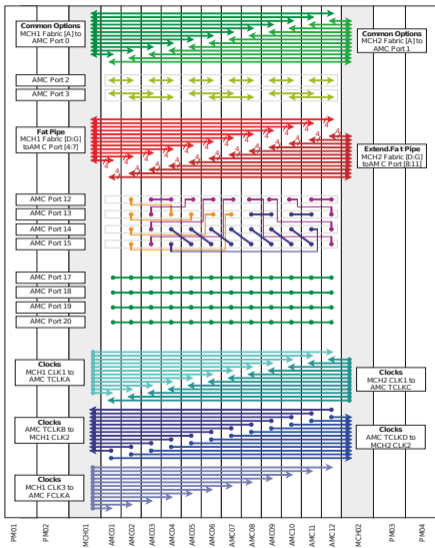

# Replacement: Struck SIS8800

- ▶ Similar features as SIS3820, but MTCA.4
- ▶ 16 channels on front panel
- ▶ 16 channels via RTM
- ▶ Synchronization with other devices via backplane

# MTCA.4

# New motion controller

MTCA.4 based motion controller for 16 axes:

DESY-ITT funded project in collaboration with MSK (N. Radakovic, M. Fenner et al.)

# Synchronization

# Synchronization

# Synchronization

# Synchronization

# Synchronization

- ▶ Synchronization of many motion controllers will be possible
- ▶ Controllers can be in different crates (optical fiber)
- ▶ Continuous scans, synchronization with detectors

# Thank you for your attention!

# Slow scans
